LAUPRECHT AS YOUR BUSINESS PARTNER

- Working with leading brands in industry ✓
- Product development and engineering ✓
- Control from log to finished products ✓
- Tailor-made products ✓
- OEM production possibilities ✓
- Multiple Komo production facilities ✓
- Strong in certified sustainable sources ✓
- Stocks in Asia and Europe ✓
- Project capabilities ✓

PRODUCT OVERVIEW

- Rough sawn timber
- S4S/E4E mouldings
- Scantlings KKK/DKD/KKD
- Components
- Profiled mouldings
- Glassbeads
- Truck flooring
- Outdoor furniture
- Solid finger joint (KOMO #33222)
- Finger joint laminated (KOMO #33234)
- Decking
- Flooring
- Plywood
- Block board
- LVL
- White primed products
- Table slabs

FROM PRODUCTION ENGINEERING TO CUSTOMER SATISFACTION

Through our own production facilities and in cooperation with our partners, we are able to produce and supply a wide variety of products, ranging from sawn timber to fully finished consumer goods. Our team of product specialists constantly develop and engineer new products to suit customer requirements.

Lauprecht supplies substantial volume to the leading distributors in the European and UK timber business. This makes us one of the largest timber sourcing and manufacturing companies in Asia. Besides sourcing raw material, Lauprecht is a strong believer in adding value focusing on semi-finished and fully-finished products. Lauprecht's quality assurance team assists local companies to achieve European standards to ensure premium products. By doing so, we guarantee the products fully satisfy our customers. Our portfolio consists of branded as well as private label products.

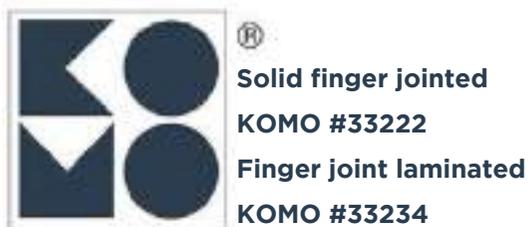

TIMBER BUSINESS

Lauprecht's core business focuses on development, processing, trading and marketing of sustainable timber related products. From rough sawn materials to finished goods. Our team has worked in the global timber and construction industry for more than 20 years. Their professionalisme in all facets of the industry, adds unique value for our partners, both customers and suppliers. With our production experience and knowledge, we can fulfill our clients wishes with a wide variety of timber species and products.

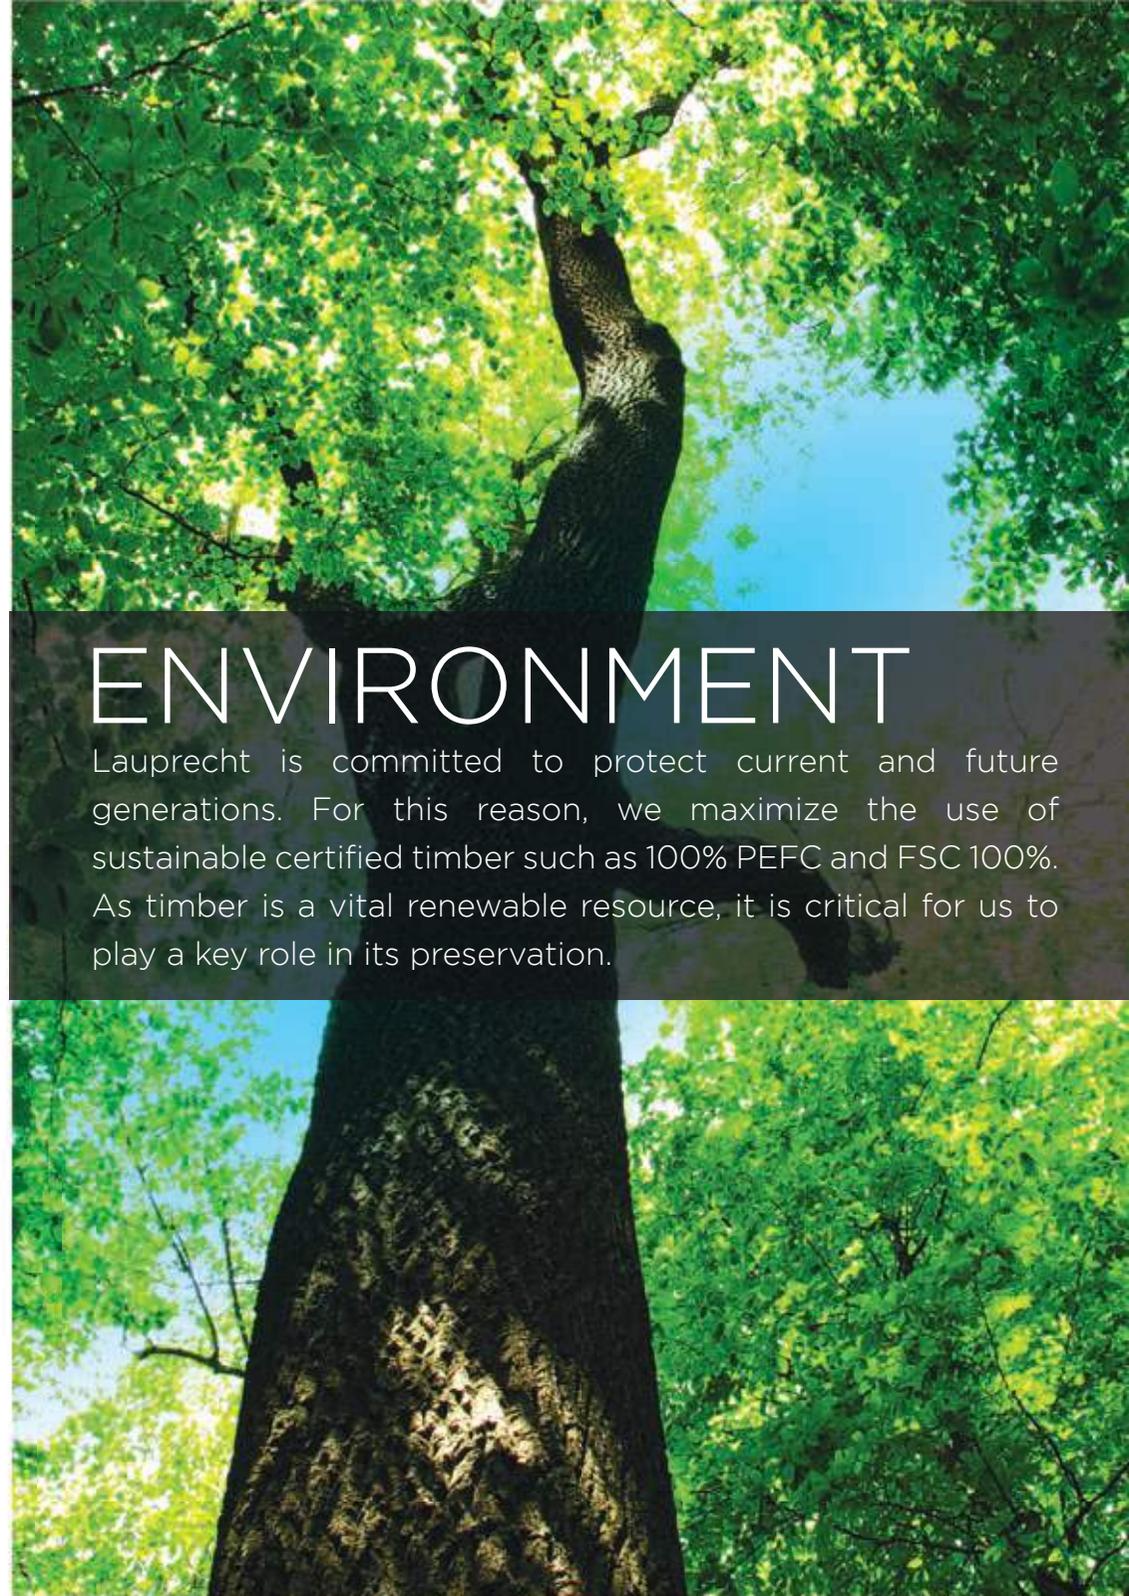

CERTIFICATES

The majority of our products have verified labels to ensure that the forest products used are from responsibly harvested and verified sources. We are able to supply volume in different species with Nature's barcode, CertiSource verified legal, PEFC, MyTlas, FlegT and VLO (Verified of Legal Origin). Other certificates are KOMO by SKH which is a Dutch quality certificate like ISO for the professional building industry. Within it, the complete production process is monitored and tested.

ENVIRONMENT

Lauprecht is committed to protect current and future generations. For this reason, we maximize the use of sustainable certified timber such as 100% PEFC and FSC 100%. As timber is a vital renewable resource, it is critical for us to play a key role in its preservation.

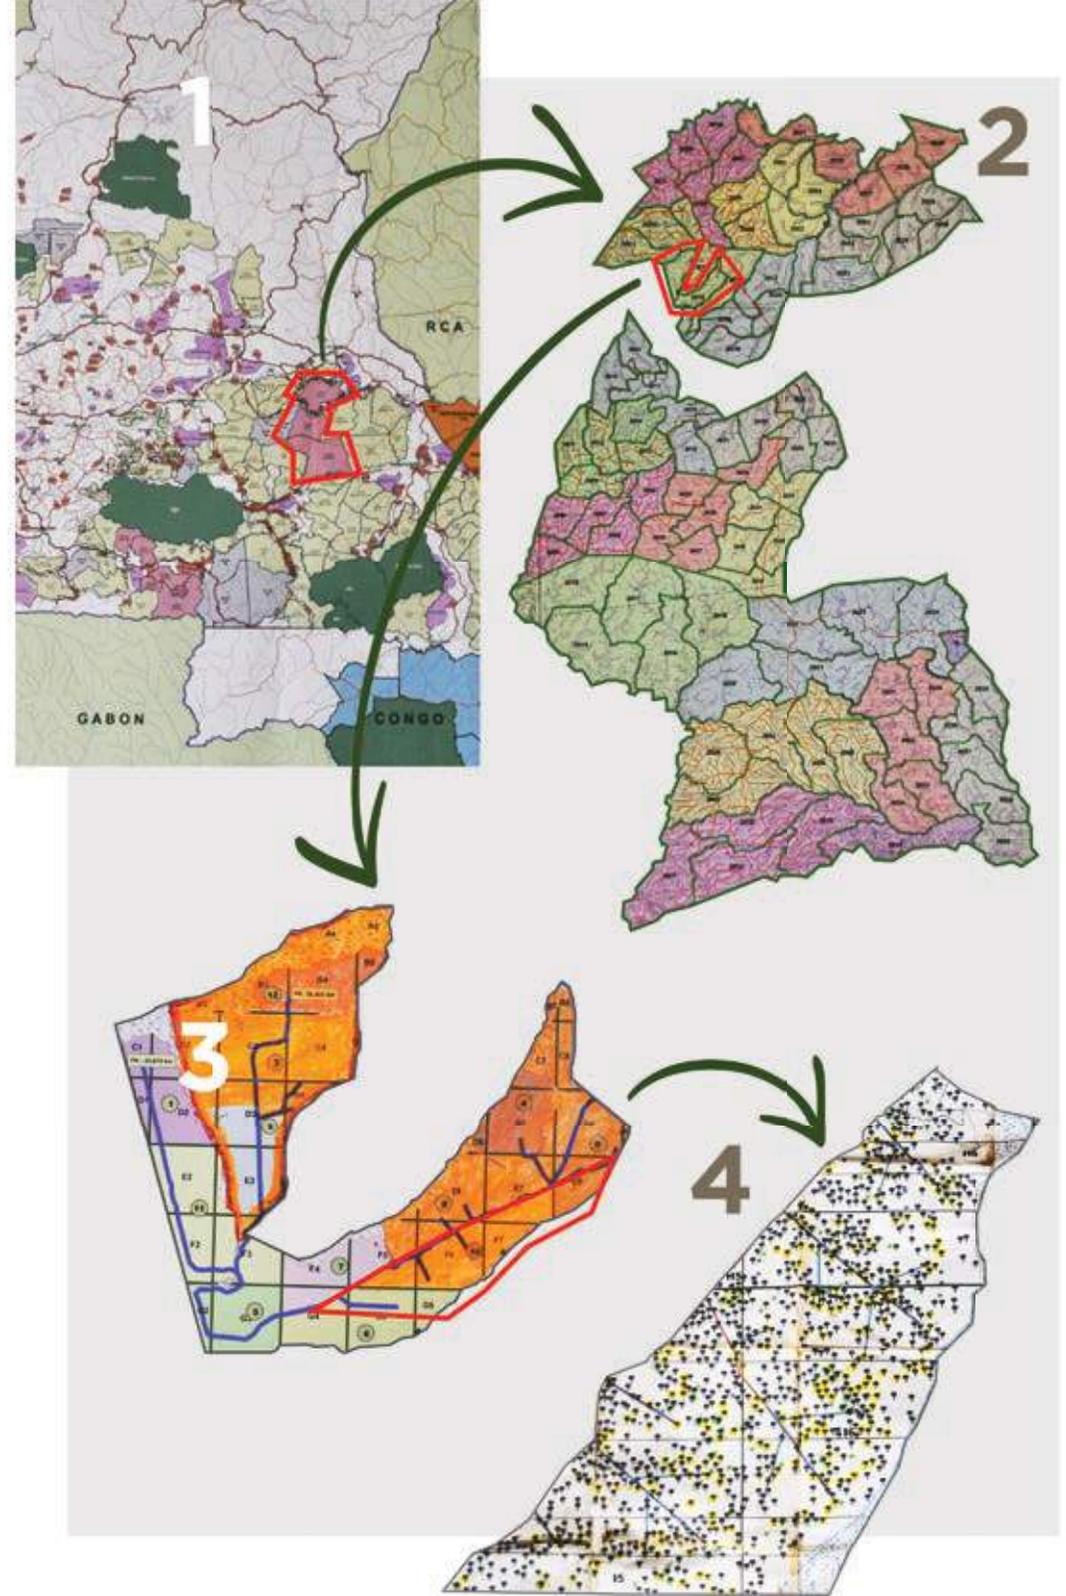

SUSTAINABLE FOREST MANAGEMENT

1. Country map
2. Concessions are split in 30 sections for a 30-year rotation cycle. Sections are sampled to estimate trees and wildlife.
3. 2 years before the actual harvesting, the sections are split in parts. Roads are set to limit harmful effects.
4. All trees including vegetation, wildlife and sacred places are GPS plotted per item. This results in a forest plan to ensure regeneration and natural beauty. Only trees with a certain minimum diameter (about 60cm+) are harvested. The company will map, enter, harvest, restore and then close the section for 30 years. In 30 years the smaller trees can mature for future harvesting.
